

PRESTASHOP PICKUP MODULE

Pickup module displays a store locator or pickup stations on the website and on checkout as an alternative of shipping. The e-merchant allows the customers to find the store or pickup station availability. The customers can find the nearest store or pickup station to pick up their orders. The module allows the admin to provide a pickup option to the customers as an alternative shipping method. The e-merchant can show the store details on the Google map. The customers can also have driving directions.

The module is highly customizable. The admin can show the distance, contact number, and store pickup delivery timing also. The pickup module offers a user-friendly interface. The admin can easily configure this module. Pickup module offers multi-lingual compatibility.

This module also helps you to create more zones and assign the zones to countries. This allows each country to have more zones on them. Can also assign stores/pickup stations to those zones.

Features Overview

Click & Collect Functionality

- Manage in-store pickup or offer an alternative shipping (edit title, price, select applicable countries, and more)
- Create separate pages for each your physical store or pickup
- Pin each store on *Google Maps*
- Beautiful designs for the stores pop-up at checkout
- Show directions from the current customer’s location to the selected store or pickup
- Choose which payment method will be available for each store or pickup

Find a Store Page or Store Pickup Location Page

Use a single separate page to provide info about all available physical stores for order pickup. With the extension, you get to:

- Create a separate ‘Find a Store or Pickup’ page url
- Add/hide a link to this page in the footer
- Introduce a possibility to filter physical store based on country, region, or city
- Offer directions
- Display the current shoppers’ location

SEO & Mobile Friendly Location Pages

Having developed one of the top SEO solutions for prestashop, we know how important SEO is. With that in mind, we've added SEO optimization possibilities for the location pages of our Pickup modules. The module allows you to:

- Configure store URLs
- Display breadcrumbs on store pages
- Add metadata
- Automatically create 301 redirects in case some URL changes occur
- Add canonical tags to avoid content duplicates

Stores Info Management

This feature-rich solution brings stores configuration to a whole new level and enables you to:

- Add an unlimited number of brick-and-mortar stores or pickup locations
- Flawlessly manage stores from the backend
- Adjust stores visibility depending on region filter.
- Upload your physical stores' images
- Specify stores' addresses on the map
- Adjust exact locations by adjusting the pin on *Google Maps*
- Promote your social media channels by providing the relevant links
- Specify critical contact details, such as phone number, email address, etc.
- Display open/closed store status dynamically
- Choose which payment method will be available for each store or pickup

Email Notifications

The extension brings the convenience of pickup orders management and receipt. Automatic email templates to inform shoppers when their orders are ready for pickup. Additionally, the Pickup module offers the functionality to enable email notifications for store admins when such orders take place. Thus, you get to process pickup orders ASAP.

Enhance Customer Experience

Knowing that 28% of online shoppers will abandon the shopping cart when offered limited order delivery options (according to *eFulfillment Service*)? In the Pickup module, you get to build more convenience and let the customers:

- See at which nearest locations which products can be pickup
- Pick up orders at the closest locations
- Easily access the 'Find a Store or pickup' page
- Filter store or pickup by country, location, or city
- Sort by distance functionality
- Overview of physical stores on *Google Maps* and get directions to the selected stores

GeoIP Functionality

Using *MaxMind* GeoIP functionality, you'll be enabled to detect the shoppers' location automatically. Additionally, you'll be able to:

- Select which scale to use as a default one
- Display a default scale in case of inability to detect the buyers' location

Stores Import/Export

Whether you are migrating your stores from any prestashop version or wish to update the existing stores in bulk, import/export functionality will come in handy. Using a CSV file you can easily manage all your stores' data, including a possibility to conveniently update your store's data translations.

Payment Method

We already know that not all payment methods are available in all location, so we have added a part where you can always select which payment method will be available for the location you are creating a new store or a pickup
