## How to install Pickup Module

First, we have to thank you for purchasing our prestashop Pickup Module.
There are two ways to make Modules or extension installation on prestashop
1. Admin Back office Store
2. FTP Account

ADMIN BACK OFFICE STORE

First, download the module or Extension from any of the marketplace you bought our module.
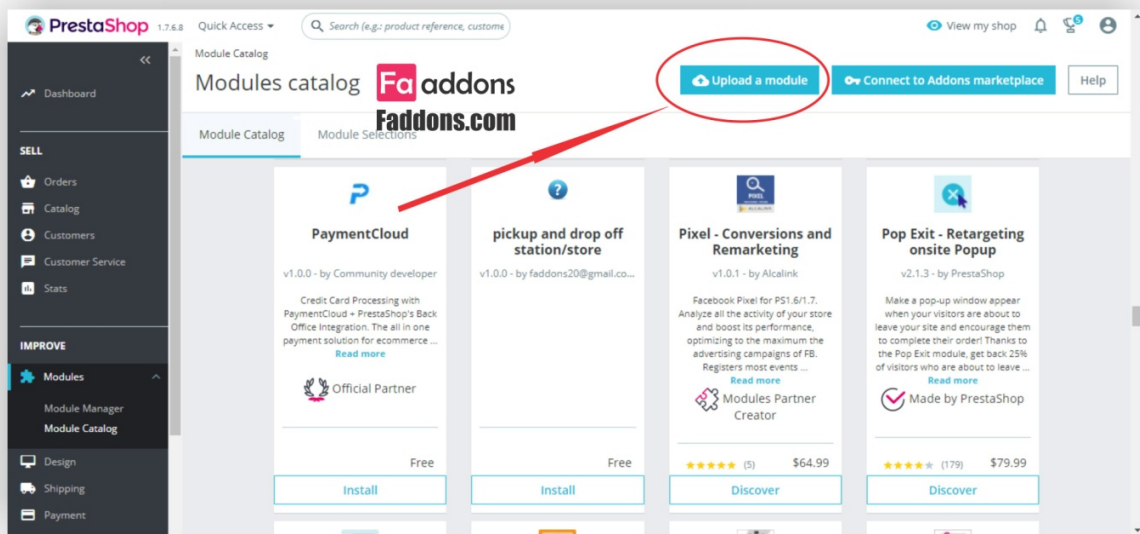

Step 1: Visit your back office URL and login with your details as a Supper Admin

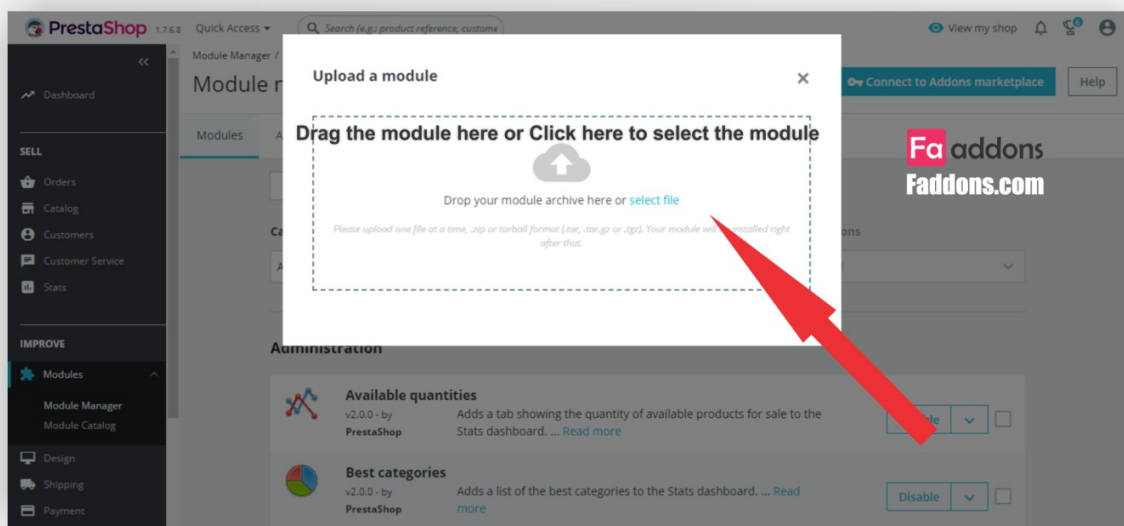

Step 2: Locate the **Module >> Module Manager** or **Module >> Module Catalog** at the left navigation menu bar as shown below and click on it.

Step 3: Click on **"Upload a Module"** Button at the top right side just as shown below

Step 4: Drag the downloaded module you bought from us to the pop out box OR Click on the pop up box to select the module you bought from us that you have downloaded. Just as seen below and wait for the module to finish up.

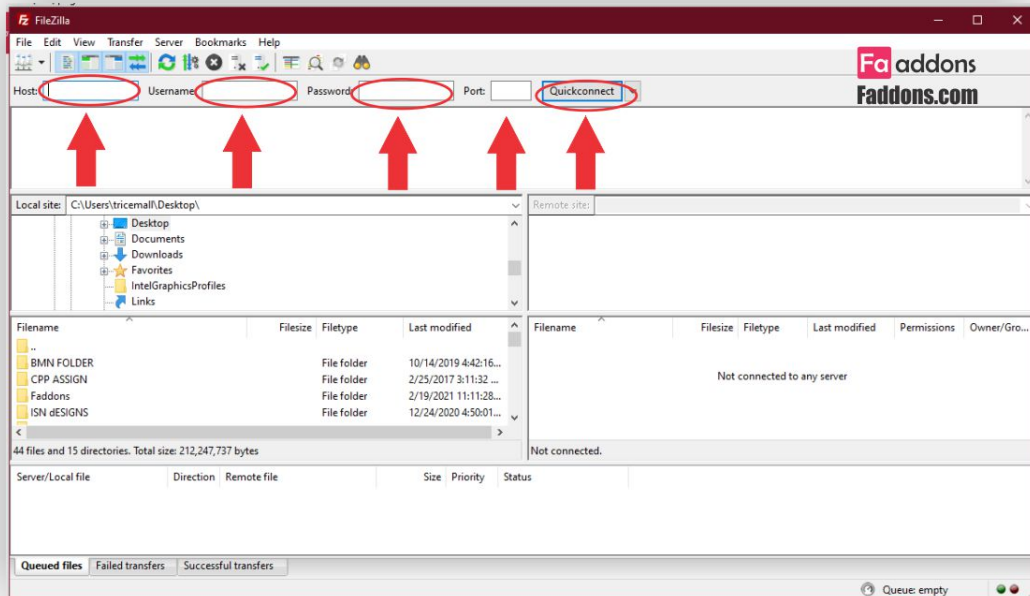

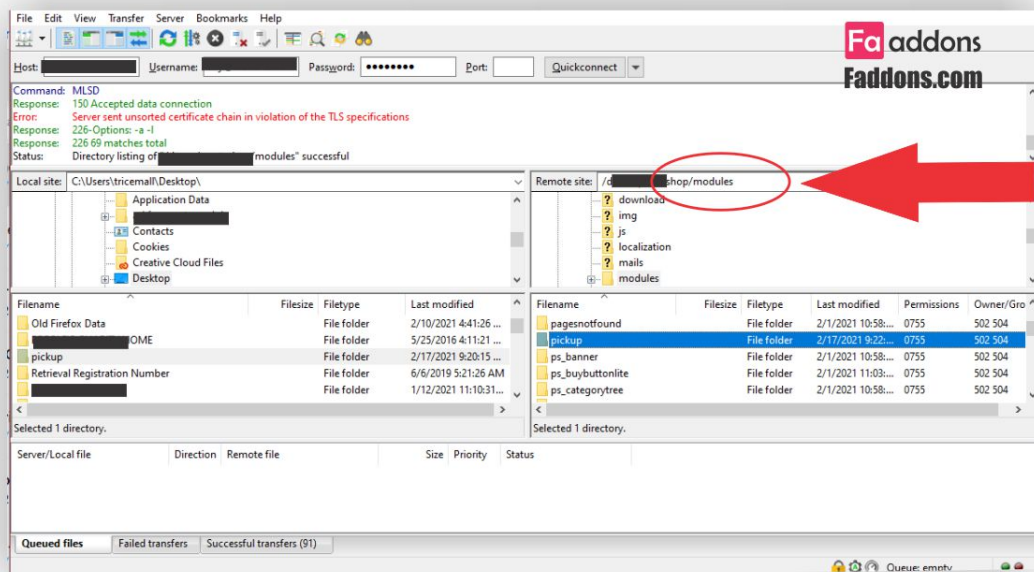

Continue from Step 6 below

USING FTP ACCOUNT

First, download the module or Extension from any of the marketplace you bought our module and extract it from the zip format it is.
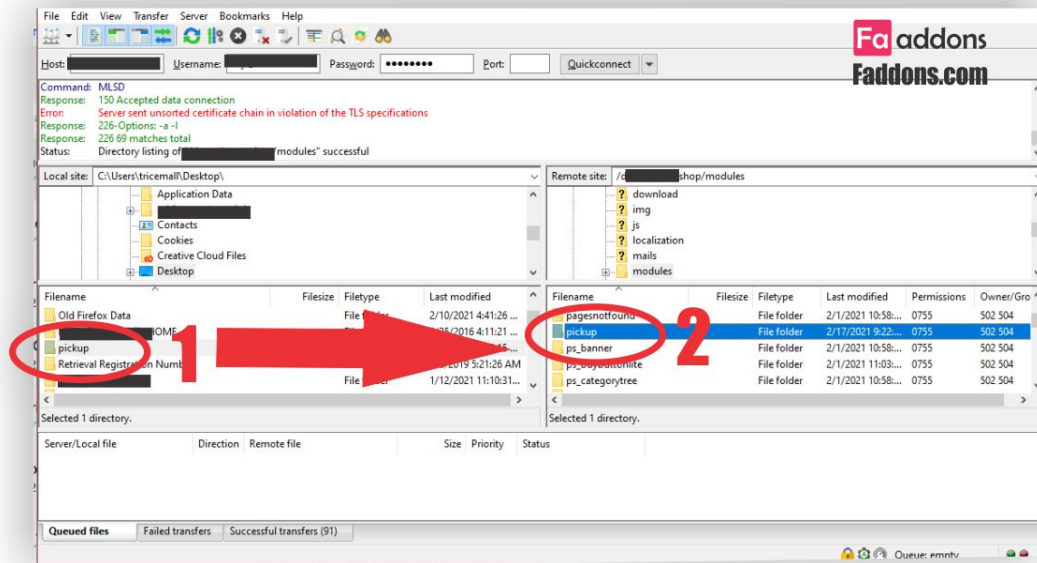

Step 1: Login to your FTP Account using any ftp application solution you have. I will be using Filezilla client application on this.

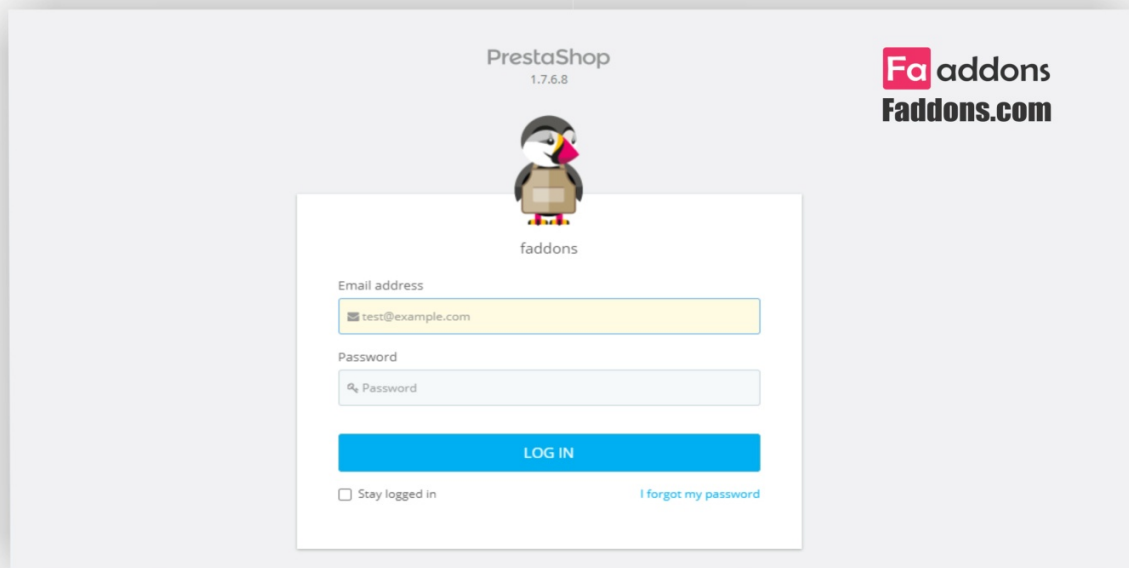

Step 2: After a successful login? Navigate to your prestashop module folder. **Example:** *Prestashop root folder/Module.* As shown below
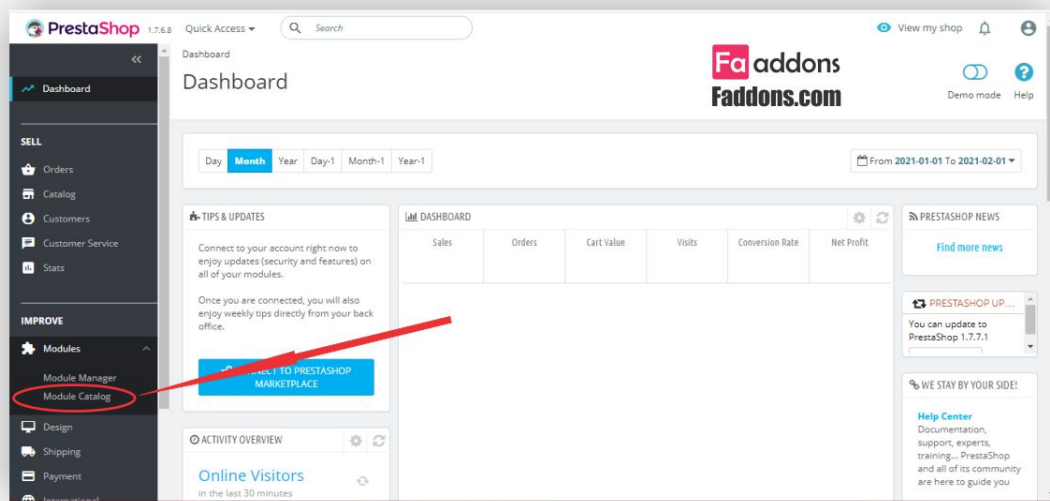

Step 3: Drag the pickup module you bought and extracted as mention before to the prestashop module folder you navigated to as shown below

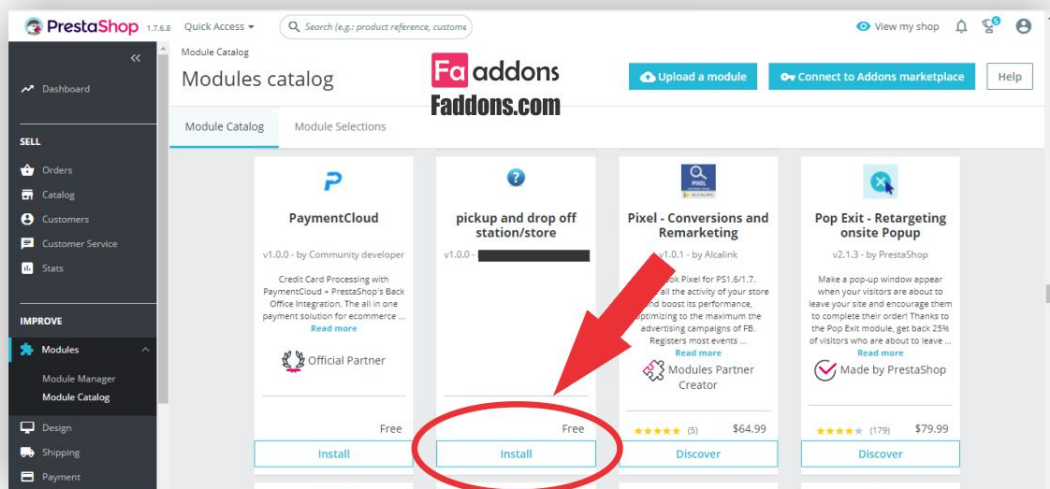

Step 4: Visit your back office URL and login with your details as a Supper Admin

Step 5: Locate the **Module >> Module Catalog** at the left navigation menu bar as shown below and click on it.

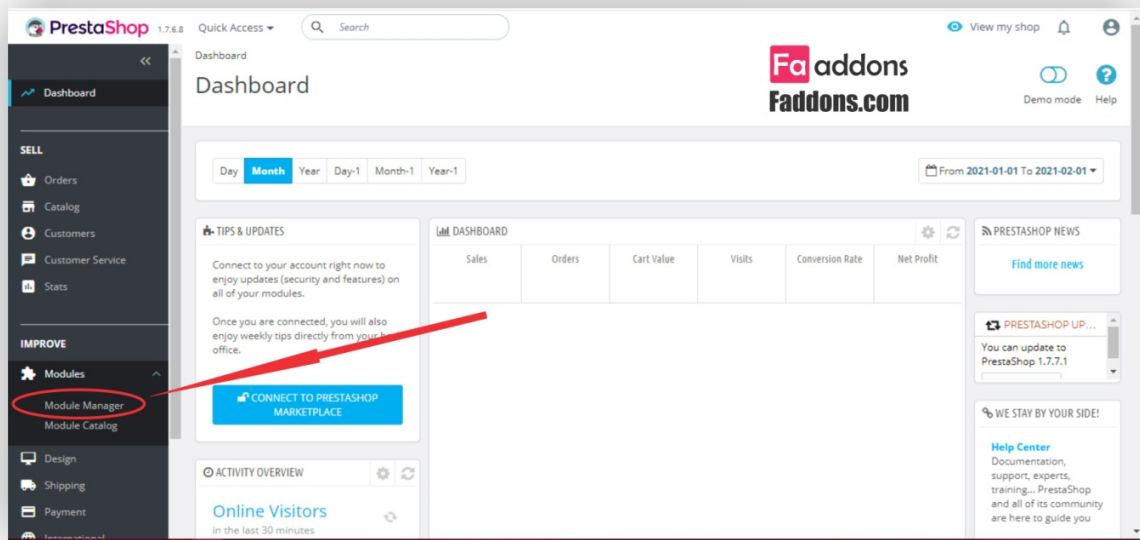

Step 6: Locate the **Pickup** Module and click on the **Install** button.

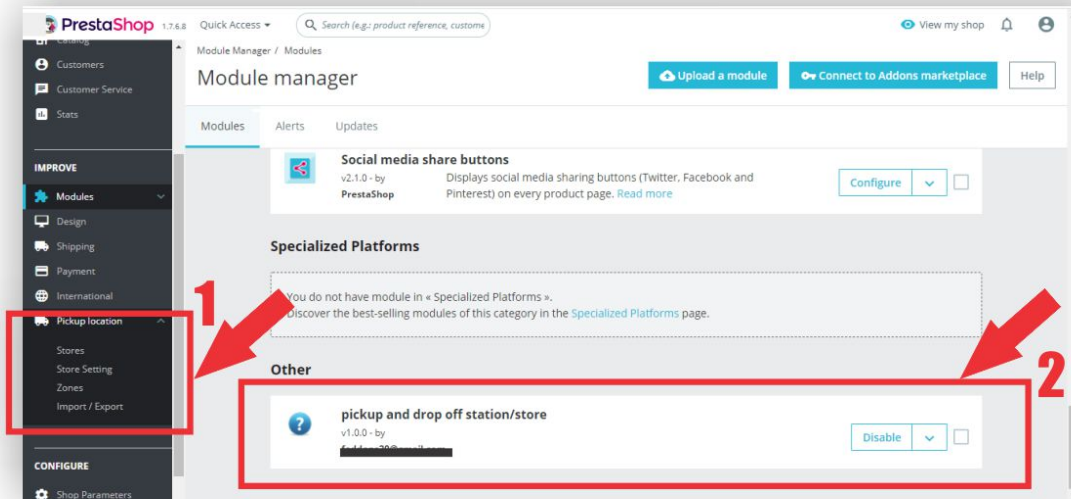

Now we have finally installed the pickup module successfully. See below for little screenshot to be sure it was successfully installed on your side.

Locate the **Module >> Module Manager** at the left navigation menu bar as shown below and click on it.

As you can see below, you will see that the module was installed successfully with its own hooks at the sidebar.

THANK YOU
