PRESTASHOP PICKUP MODULE

Pickup module displays a store locator or pickup stations on the website and on checkout as an alternative of shipping. The e-merchant allows the customers to find the store or pickup station availability. The customers can find the nearest store or pickup station to pick up their orders. The module allows the admin to provide a pickup option to the customers as an alternative shipping method. The e-merchant can show the store details on the Google map. The customers can also have driving directions.

The module is highly customizable. The admin can show the distance, contact number, and store pickup delivery timing also. The pickup module offers a user-friendly interface. The admin can easily configure this module. Pickup module offers multi-lingual compatibility.

This module also helps you to create more zones and assign the zones to countries. This allows each country to have more zones on them. Can also assign stores/pickup stations to those zones.

USER MANUAL

Extension Setup

Google Maps API Key

To show the map with the locations of the stores, you'll need to obtain the **Google API**. For this, please do the following:

> *To use the **Google Maps API key**, you must enable billing in the **Google Cloud Platform**. For this, please use this **guide**.*

1) Go to **Google Cloud Platform** and log in using your credentials.

2) If you already have some Google Cloud project associated with your website, select it in the Select a project dropdown. Otherwise, click the **NEW PROJECT** link:
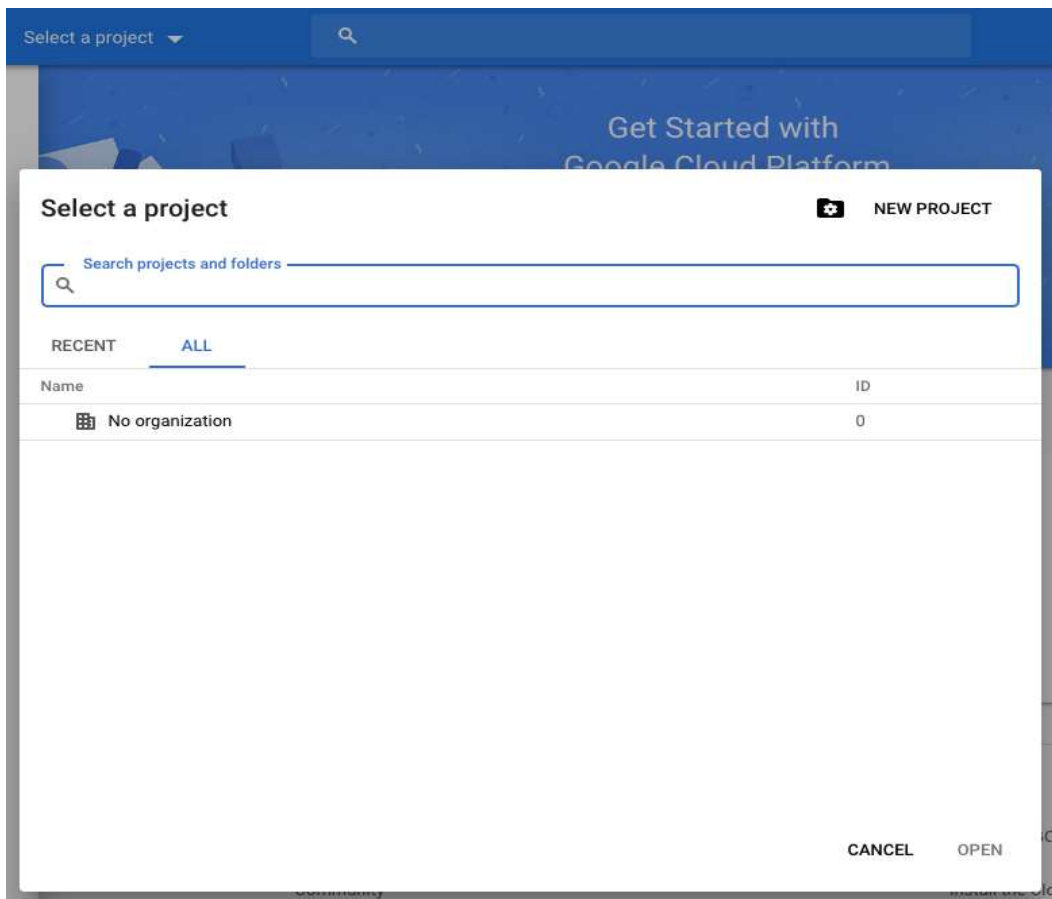

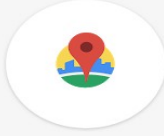

3) Add some **Project Name** and click the **CREATE** button:

4) Go to **Google Places API** and click the Enable button:

5) Go to **Maps JavaScript API** and click the Enable button:

6) Go to **APIs & Services > Credentials**, click the Create Credentials dropdown and select the API Key option:
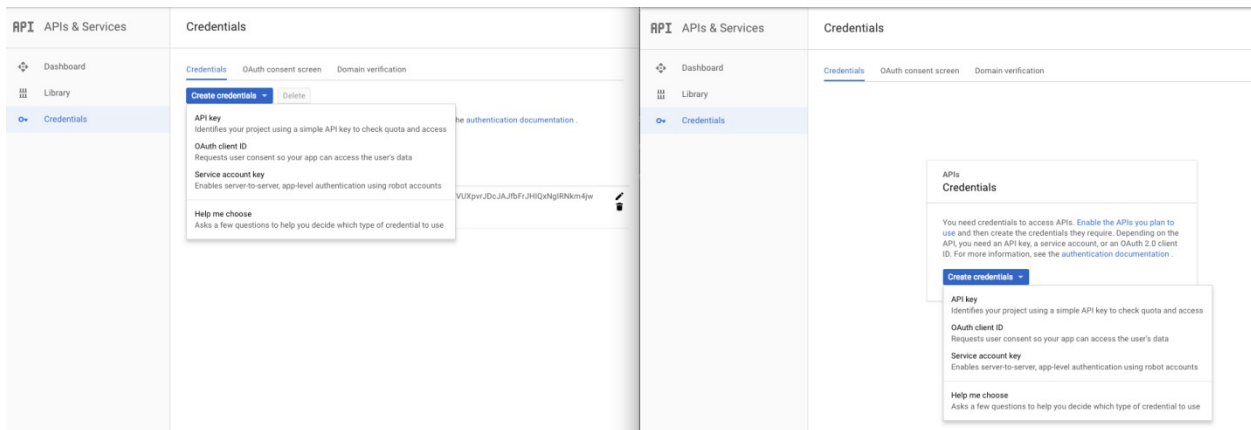

The left screenshot shows the workspace if you already have some APIs for your current project, the right screenshot is for the new one.

7) This creates the new API key that you need to restrict in order to avoid any potential misuse. Click the **RESTRICT KEY** link:
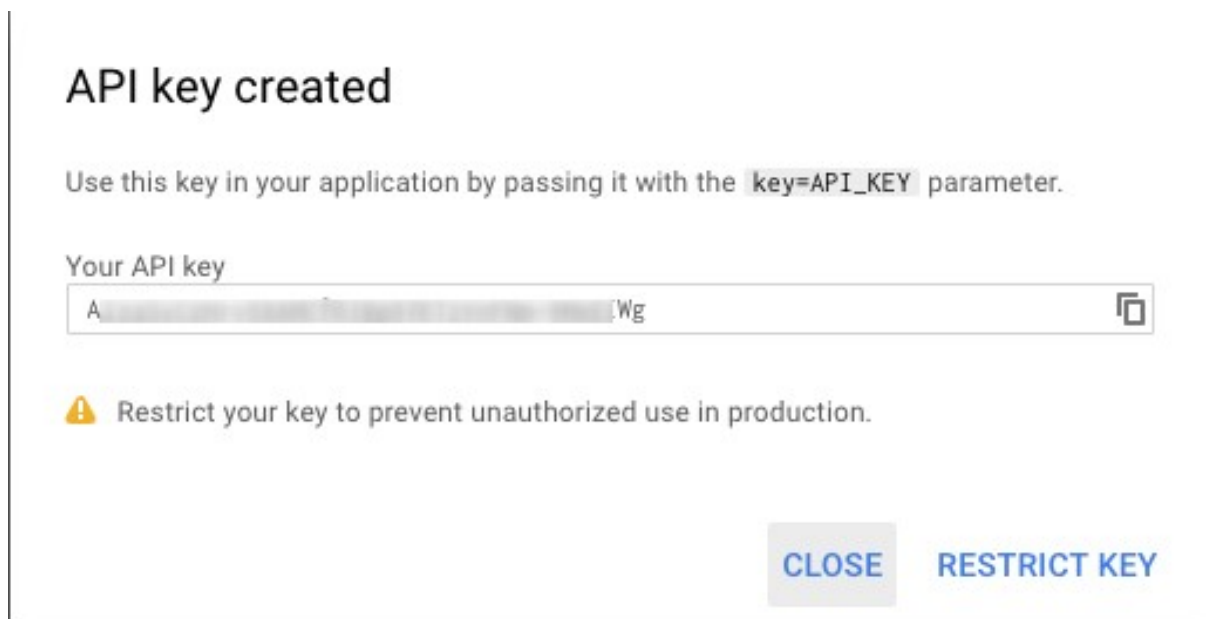

8) In the Application restrictions tab select the **HTTP Referrers (web sites)** and add your website name. Note the yellow triangles above the tabs informing you that the restrictions are not set until you initiate the restrictions:

9) In the API restrictions tab select the **Maps JavaScript API** and Places **API**.

Note that both triangles are gone now. Click the Save button.

10) On the **Credentials** workspace, copy the created API key by clicking the button.

11) Here is your **Google Maps API key** that you can use for the correct functionality of the **Store Locator extension**.

General Settings

Log into the **Prestashop Admin panel** and go to **Pickup Location → Store Settings**
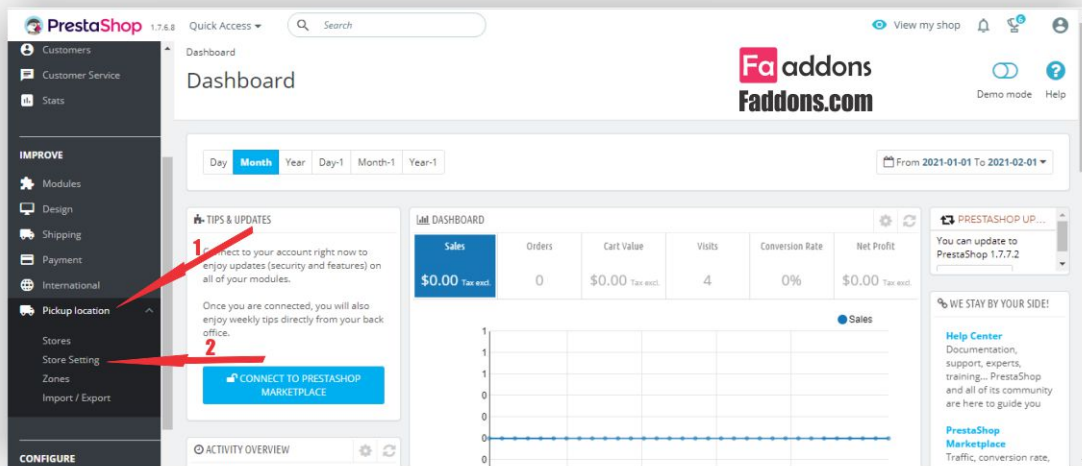

Pickup Location Settings Overview
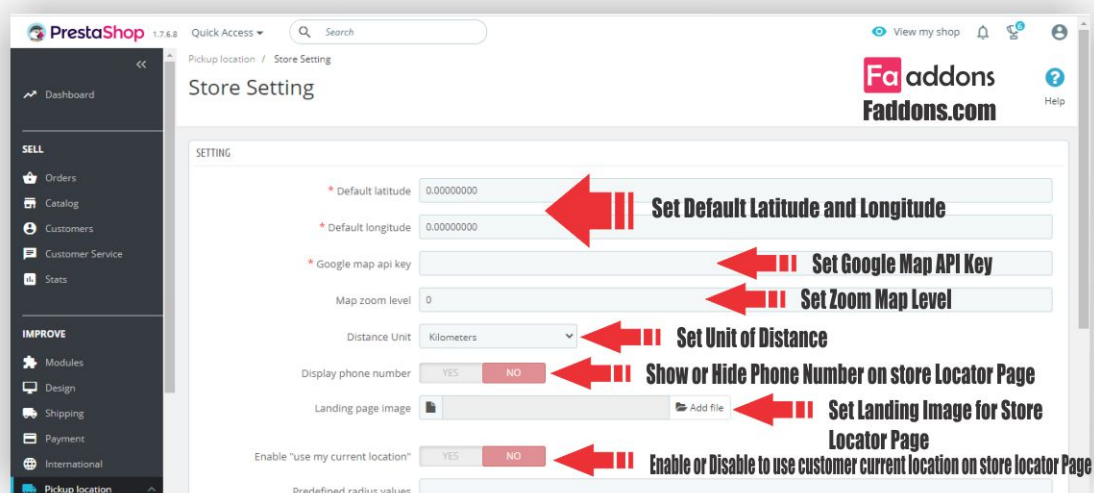

Default Latitude and Longitude:

The Default latitude and Longitude provides the default area to show when the map is loaded, if the extension could not detect a customer's location using the GeoIP and the browser's location.

Google API:

Google Maps API Key - the Google Maps key you should copy from your Google Cloud Platform. Set the Google map API key in this field. The process to generate an API key has been discussed above.

Map Zoom Level:

Admin can set the default zoom level for the location map.

Distance Unit:

Admin can set the unit of distance in kilometers or miles. This distance depicts the reach to offline store or Pickups from the customer's exact location.

Display Phone Number:

Enable or disable this option to show or hide the contact details for the store at store or pickup page.

Landing Page Image:

This option set the landing page image for the store locator page. Simply browse and choose any file of your choice.

Enable "Use my current location":

This option adds the **'Use my current location'** option for your customers to filter the stores or its current location. It uses the current location from a customer's browser (if this is allowed by the privacy settings).
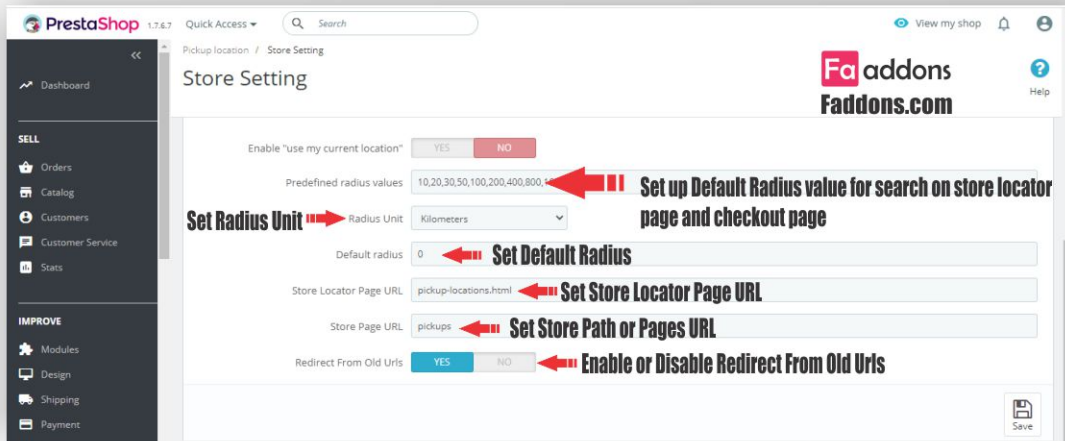

Predefined Radius Values:

This setting allows you to specify the predefined radius values for the store or pickup search feature. The values should be separated by the comma here.

Radius Unit:

This setting sets the distance unit for the setting above.

Default Radius:

This value determines the default radius to display the available store or pickup locations. It helps to improve the front-end performance if there are many stores in the system. Leave empty or '0' to show all stores by default. The default radius is calculated from a customer's location or a default location.

Store Locator Page URL Key:

This option sets a custom page URL for the store locator page.

Store Page URL:

This setting defines the base path in the URL to the store page, which is added after your store domain: **yourdomain/stores/**, where the "stores" is the default value of the "Base Path". If empty, the default "stores" will be used.

Redirect from Old Urls:

This setting automatically creates SEO-friendly (301) redirects from old store URLs to new ones if the URLs are changed. It is recommended to always keep this setting enabled on the live store.

CREATION OF SHIPPING ZONES (IF NECESSARY)

Log into the **Prestashop Admin panel** and go to **Pickup Location → Zones**
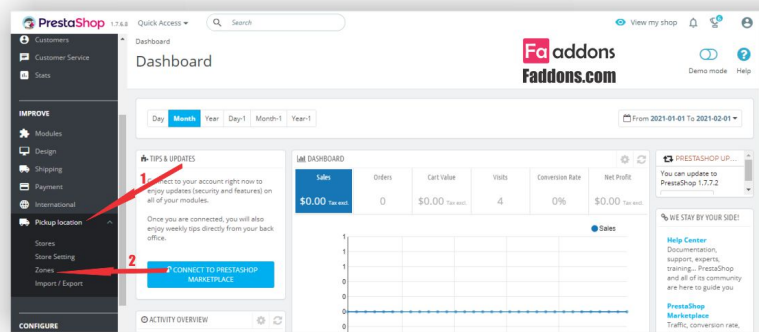

Click on the **plus (+)** button to create a new zone.
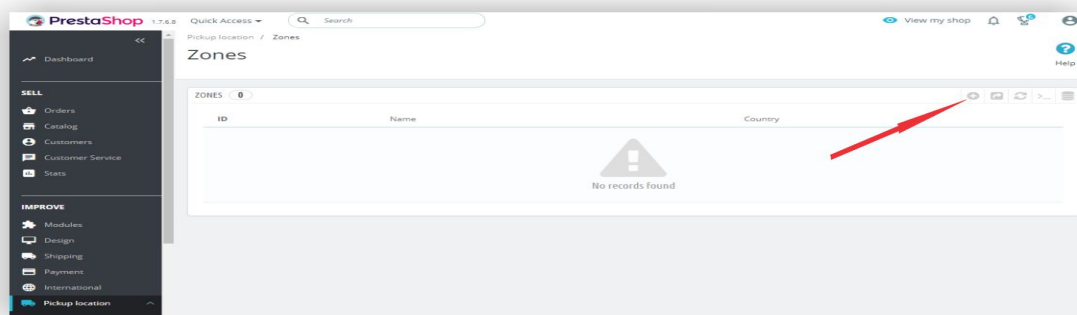

Select country and type in the zone name you wish.
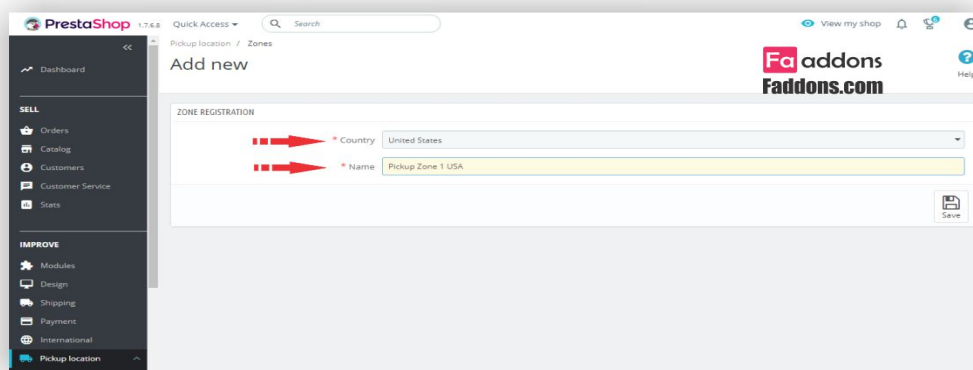

Country:

This simply means the country you are assigning Zone to

Name:

The name of the New Zone you are creating.
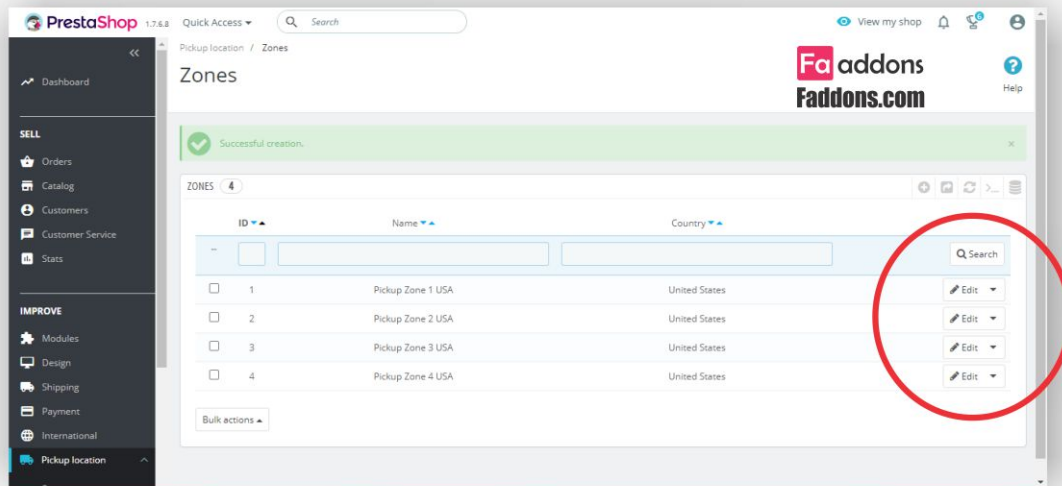

You can also, Edit or delete zones.

CREATION OF STORES OR PICKUP LOCATIONS

Log into the **Prestashop Admin panel** and go to **Pickup Location → Stores**
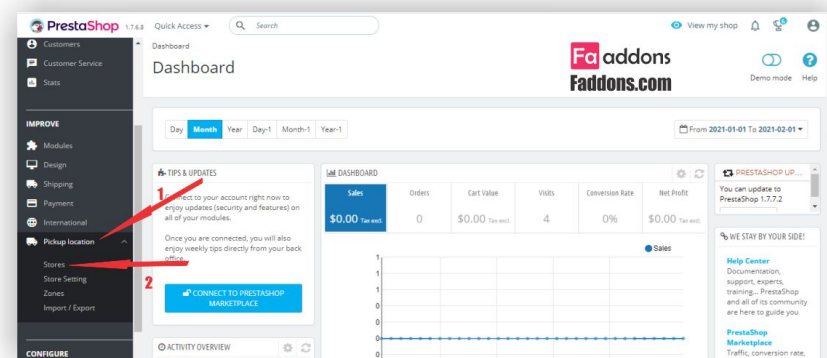

Manage Stores

The owner of eCommerce stores can add new physical stores or pickups for their shipping under this admin section. They can configure the details of the existing stores and Pickups or can delete them directly from this place. This way, the Pickup module allows the admin to add, delete and edit the store or pickup related details.

Also, this admin interface gives you a complete view of the list of existing offline stores or pickups.

The store admin can easily add a store or pickups from the admin panel

Click on the **plus (+)** button to create a new store or pickup location.
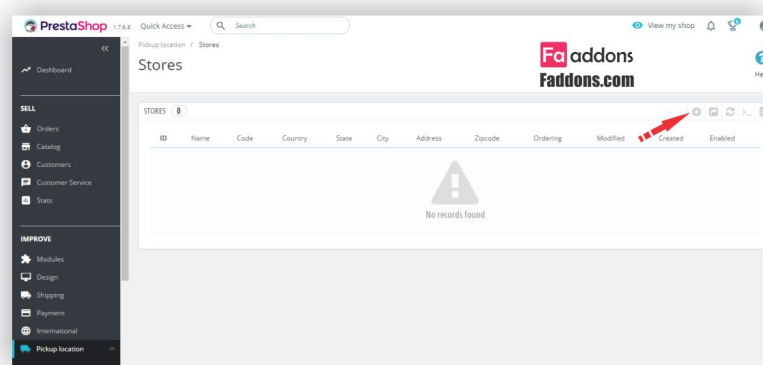

New physical stores or pickups can be added in two ways:
1. Adding stores manually
2. Importing stores or pickups using .csv file

Adding Stores Manually
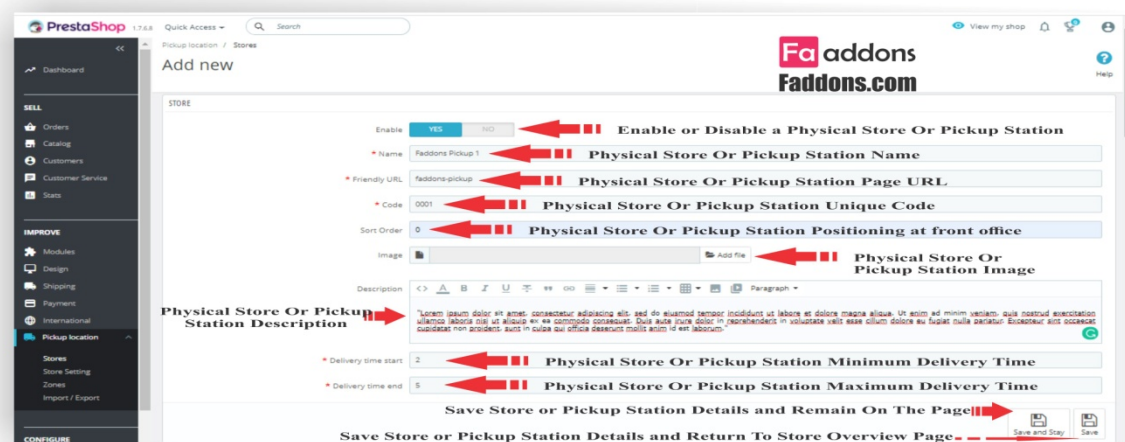

Enable: This option shows or hides the particular physical store or Pickups.

Name: You can set the name of your store or pickups using this option.

Friendly URL: This setting allows you to add an address, a code and/or a name of a store to the URL key your store pages

Code: The Store Code is the technical name of the store. This name works as the store ID and won't be visible to the customers.

Sort Order: The Sort Order provides the position of the store on the store list block or at checkout page. The smaller the number value here, the higher the store will be shown on the list.

Image: Using this option, you can upload a desired image for the store. But if no image was uploaded, the default image will display.

Description: The store can have the Image and the Description (that supports HTML tags)

Delivery time start: The Store or pickup station minimum delivery time range. And only accepts numbers (calculated in days) 1= a day, 2 = two days etc.

Delivery time ends: The Store or pickup station maximum delivery time range. And only accepts numbers (calculated in days and has to be equal to **Delivery time start** or higher) 1= a day, 2 = two days etc.

Zone: Each Store or Pickup is been assigned to a zone created from the module or extension for easy shipping cost calculation.

Country: This option sets the country of the store or Pickup Station.

State: This option will set the state of the store or Pickup Station.

City: This option lets you set the city of the store or Pickup Station.

Address: You can set the address of the store or Pickup Station.

Zip Code: This option lets you set the zip or postal code for the store or Pickup Station.

Phone Number: This option sets the contact number of the store or Pickup Station.

Email: This option allows you to set the contact email address of the store or Pickup Station.

Website: This option sets the link to the official website of the store or Pickup Station.

Facebook: Set the Facebook social networks link and/or messengers
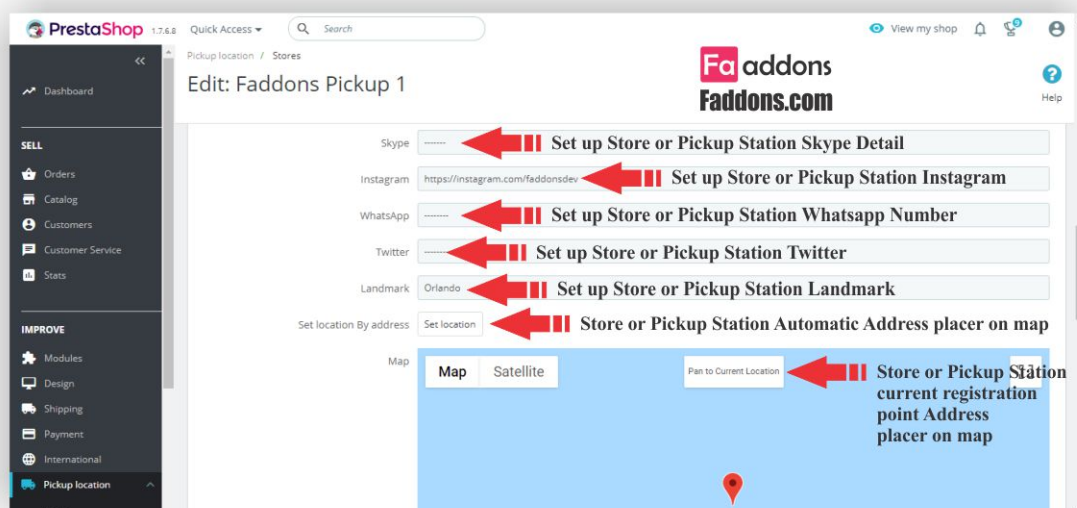

Skype: Set the skype social networks

Instagram: Set the Instagram social networks link

Whatsapp: Set the Whatsapp social networks messengers

Twitter: Set the Twitter social networks link

Landmark: Set the closet, nearest junction or place to the store or pickup station address.

Set location by address: This button automatically place the store or pickup station address on the address box to the map.

Pan to current location: This doe's similar work like **Set location by address** but in a different way. It places the current location of the person registering the store or pickup station and not the location of the address on the store or pickup station address box.
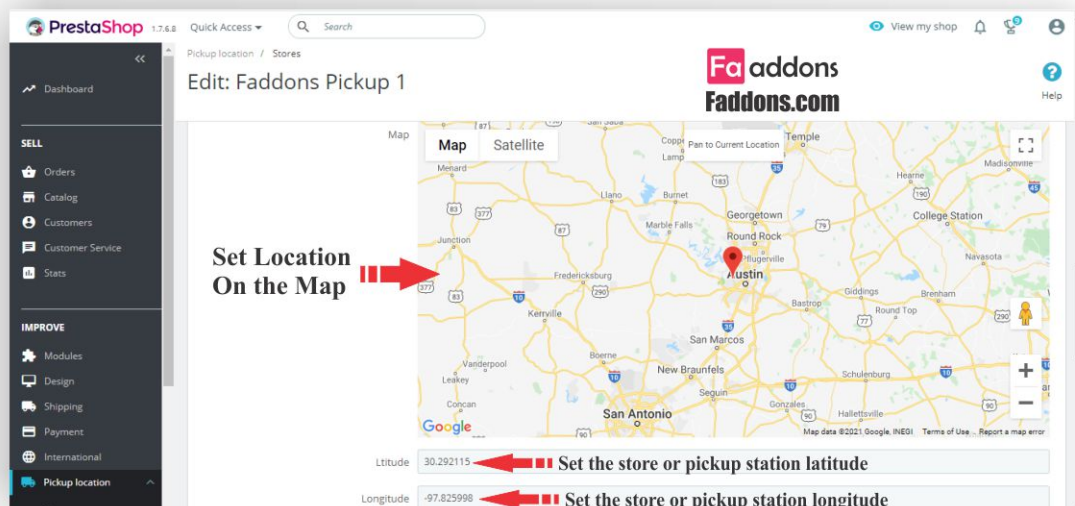

Latitude: This option sets the latitude value of the store.

Longitude: This option sets the longitude value of the store.

Google Map Location: This option allows you to point the address of the store on Google Map using locator icon.

The next section describes the **Working hours** of the store or pickup location. By default, the Everyday is selected.
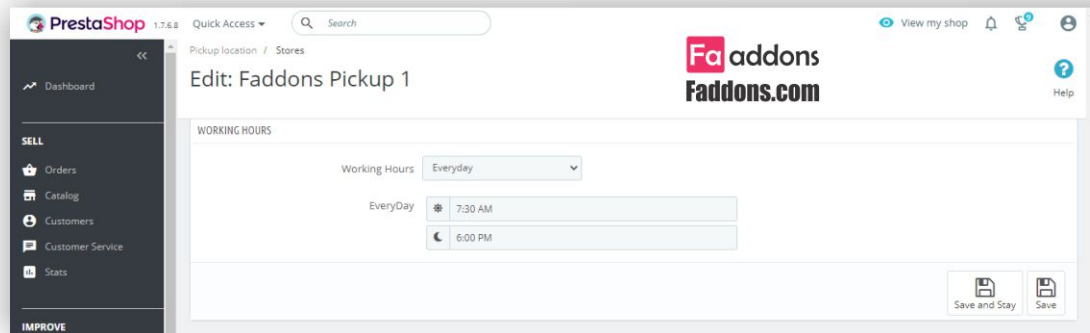

If the store or pickup location has the same working hours over the week, you can just select the **open and close time**. However, if the working hours are different and/or the store has the day-offs, you can choose the **Per Day of Week**. After that, the same timetable appears but is provided for each day of the week with the day-off toggle: The red means inactive and the green means active. To activate or deactivate, click on it.
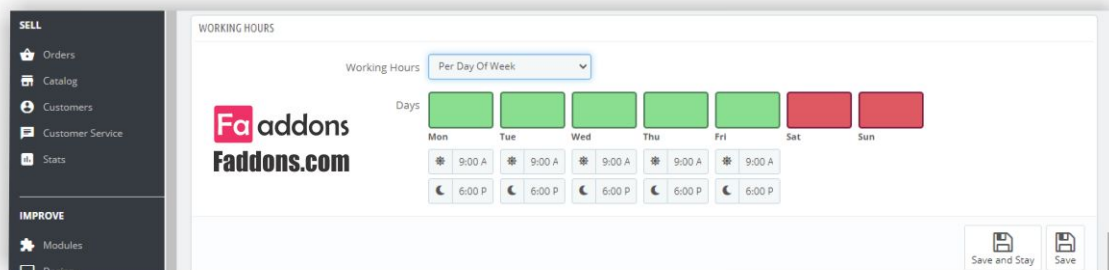

Page Settings

This section allows you to configure the **SEO fields** for your store or pickup station pages.
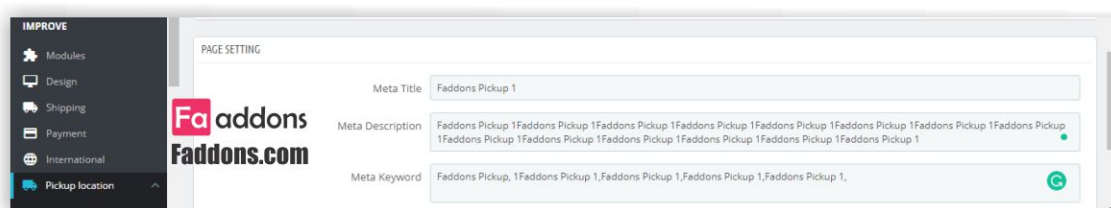

Store or Pickup Station Payment Method

This section allows you to configure the **Payment Method** for your store or pickup station pages. Any selected payment method here will be available on checkout page when placing order, if the store or pickup station was selected as an alternative of shipping.

NOTE: If none of the payment methods are selected, all payment methods will be available on checkout page when placing order, if the store or pickup station was selected as an alternative of shipping.

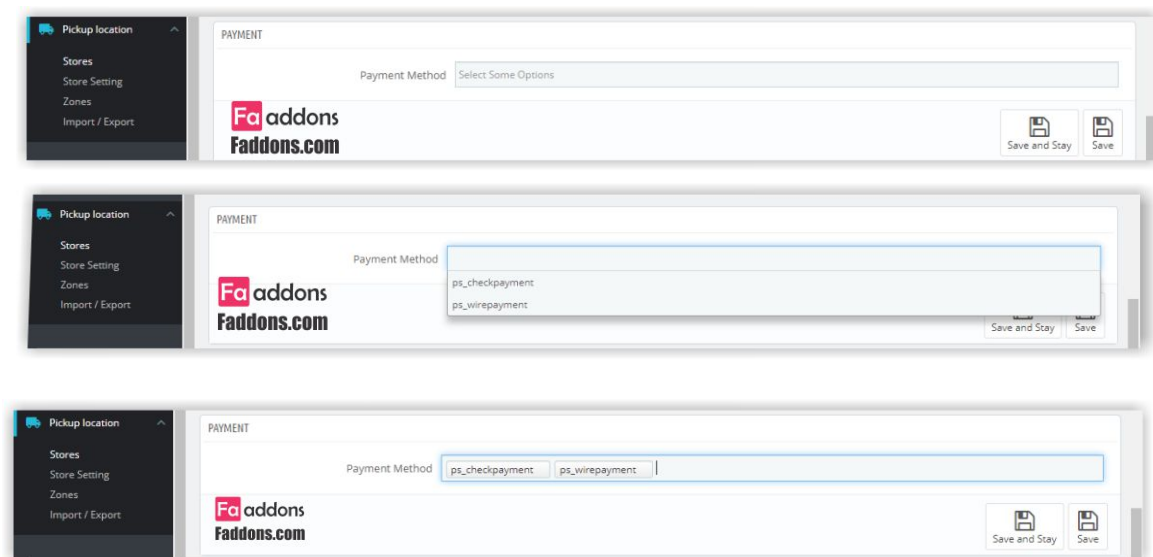

Import/Export (Importing stores or pickups using .csv file**)**

The extension allows you to **import/export** the stores or pickup locations. It allows you to add new stores or pickup locations and update the existing stores or pickup locations in bulk. You can also copy the data between different prestashop stores or pickup locations.

In order to import or export the stores or pickup locations you should navigate to **Prestashop Admin panel → Pickup Location → Import/Export**.
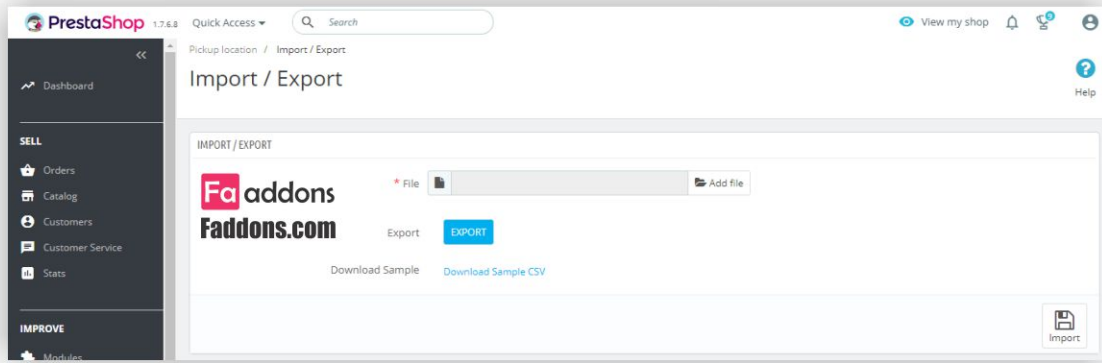

- **File:** Using this option, you can upload the .csv file in order to import new physical stores or pickup stations.
- **Download Sample:** Download a sample file to check the way of listing store information in a .csv file format.
- **Export:** Using this option, you can export the stores or pickup stations in .csv file for easy importation or bulk update.

The extension gives you the ability to download the example **CSV file** in order to get to know the structure of the **CSV file** that should be used to import the stores or pickup locations.

## Store or Pickup Station Shipping Cost & Handling Fee

This Section lets you set the store or pickup station shipping cost by weight or by price and also to zones assigned during the store or pickup station registration. It also allows you to enable or disable the handling fee and set up the amount.

How to set up Store or Pickup Station Shipping Cost & Handling Fee

In order to set up stores or pickup station shipping cost, you should navigate to **Prestashop Admin panel → Shipping → Carriers** and locate pickup shipping method.
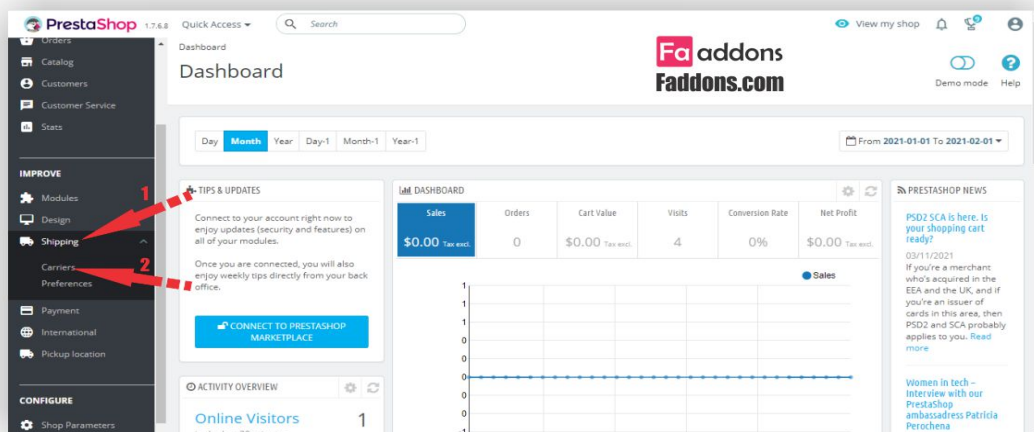

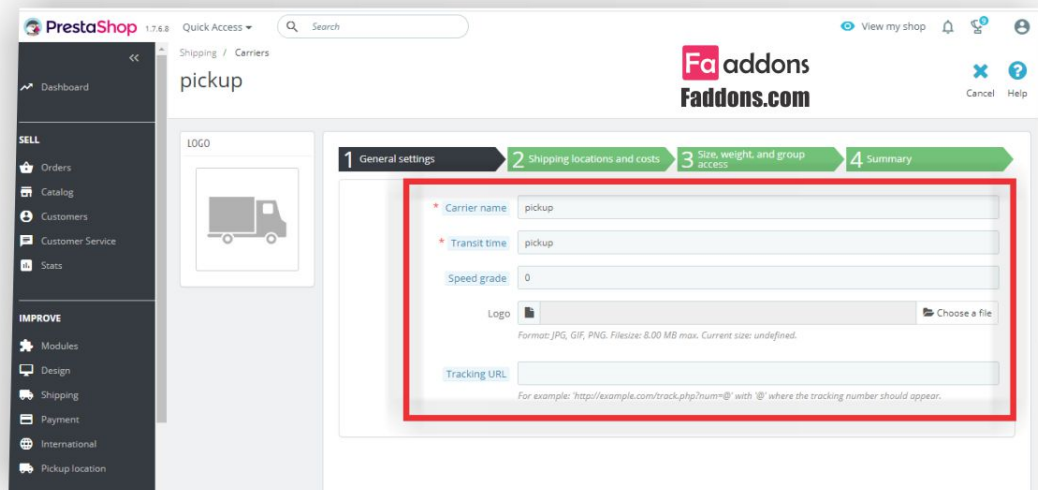

Click on **Edit**
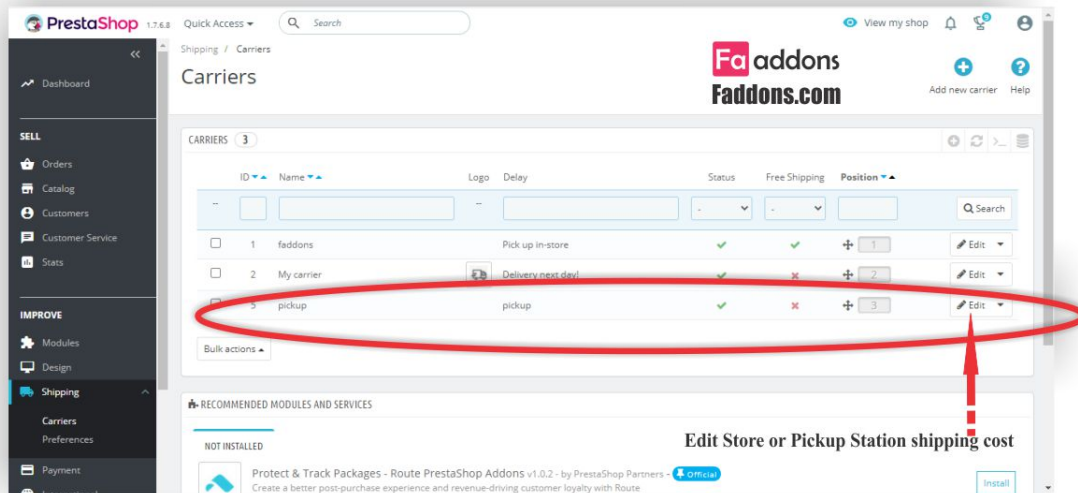

You can set up the carrier details here like, speed, image, URL (if you have any). Click on **NEXT** Button after that.
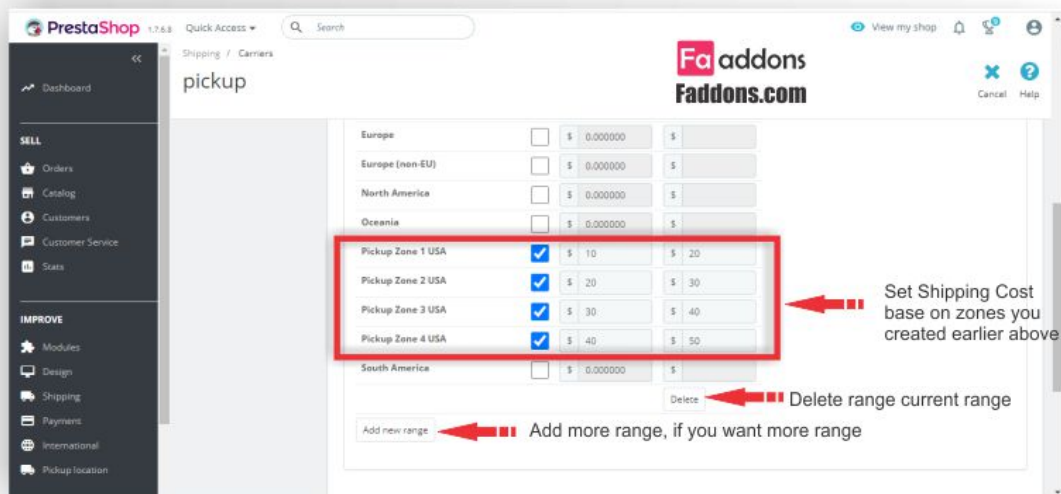

Note: This first page is not much necessary or important.

Next is to set up the shipping cost by weight or by price. Depending on your choice. On this page, you can still decide to

- Enable or disable handling fee
- Enable or disable as free shipping
- Choose how shipping cost will be calculated. Either by weight or by price
- Choose if tax will be added to shipping cost or No Tax

- Choose to disable carrier when weight range or price range calculation is out of range or to choose the highest define range price when out of range.
- Set up the weight range or price range. Depending on the billing type you selected above as stated.
- Can set up shipping cost base on zones created earlier by country.
- Can add many shipping ranges to calculate shipping.
- Can delete shipping Ranges too.

Click on **Next** when done

Next is to set up the maximum package weight, maximum package height, maximum package depth, maximum package weight that this shipping carrier can carry. Click on **NEXT**

Next is to see the overview of what you have set and click on **Finish** Button

How to set up Store or Pickup Station Handling Fee

In order to set up stores or pickup station handling fee, you should navigate to **Prestashop Admin panel → Shipping → Preferences**
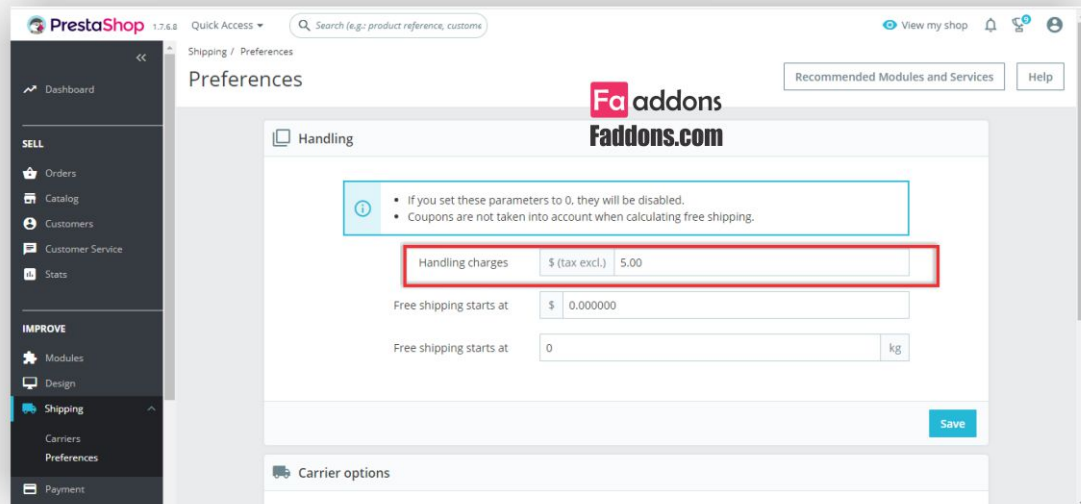

From the above image, you can set up the handling fee or rather set it up to zero (0) to disable it. You can also use this view to set up free shipping when price starts from whatever was set there and also to set up free shipping when weight starts from whatever was set there too. You can set them to zero (0) to disable those options.

### SET UP PICK UP LOCATOR PAGE LINK AT THE FOOTER

In order to set up stores or pickup locations link page at the footer, you should navigate to **Prestashop Admin panel → Design → Link Widget**
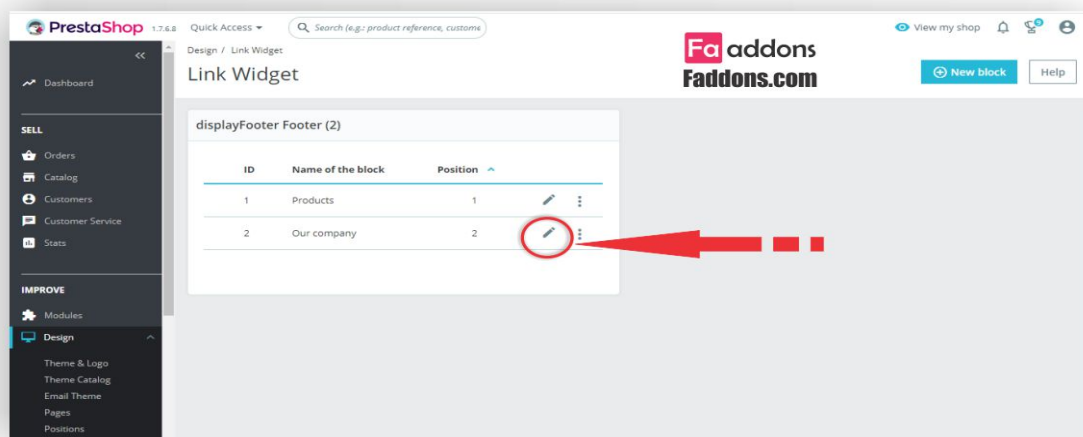

Click on the edit symbol and fill in the URL or link as created on **Prestashop Admin panel → Pickup Loaction → Store Setting → Store Locator Page URL** including your domain name. Example: http://demo.faddons.com/prestashop/locators.html
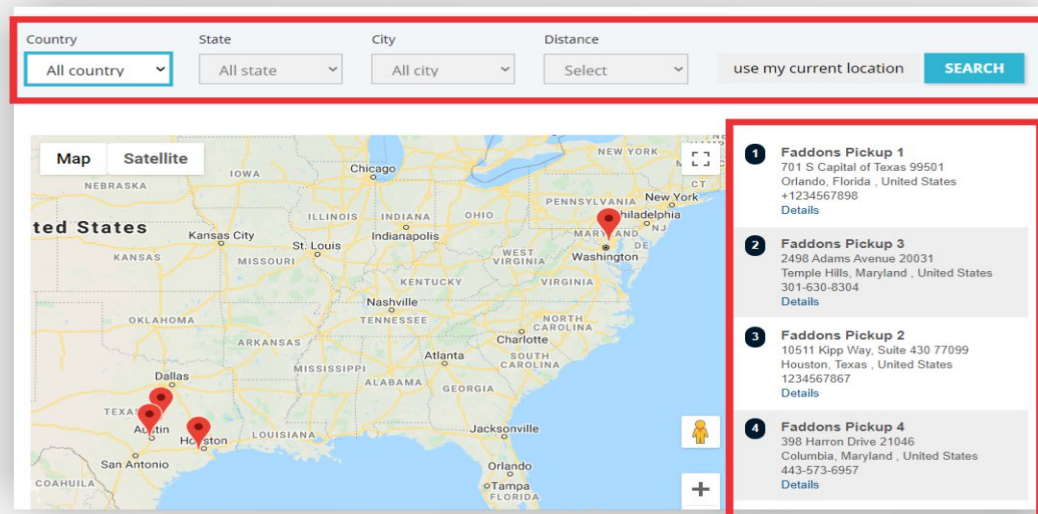

As shown below. Click on Save when done.

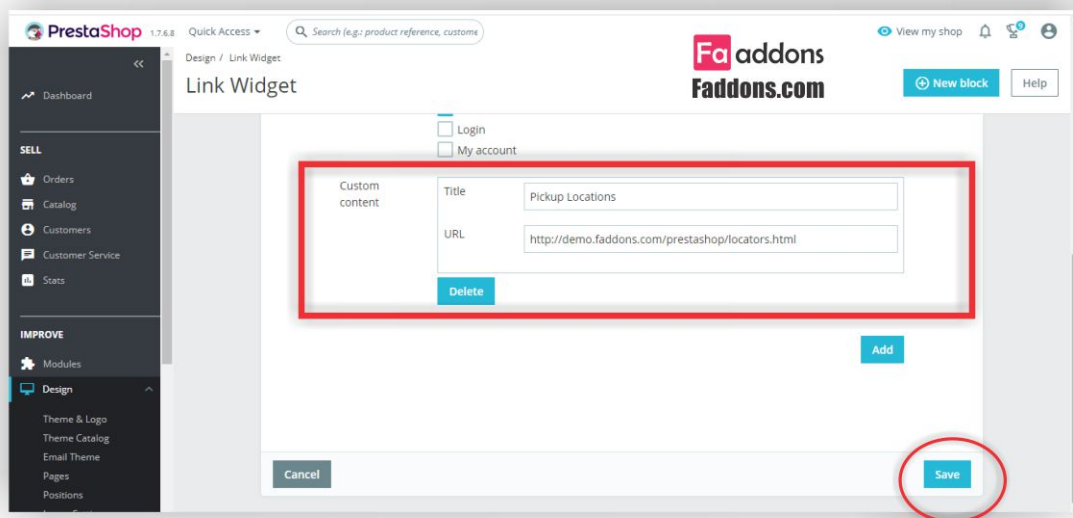

FRONT INTERFACE OF PICKUP MODULE STORE LOCATOR

In the front office, the customers can find the nearby stores or pickups directly from the store locator page url as set up earlier.

They can locate the nearest store or pickup location by selecting the country, state, and city or distance dropdown that is conveniently reachable from their actual location. For the provided country, state, city or distance, a list of store recommendations is shown to the customer. Customers can view the details for any of these physical shops or pickup location and can pick up their products when delivered.

Moreover, they can check the contact details, name, distance and opening timings for the shop or pickup location. Hence, this way the customers get their product faster, conveniently and without paying extra shipping charges or pay less shipping charges.

**Store or Pickup Location link in the footer section**
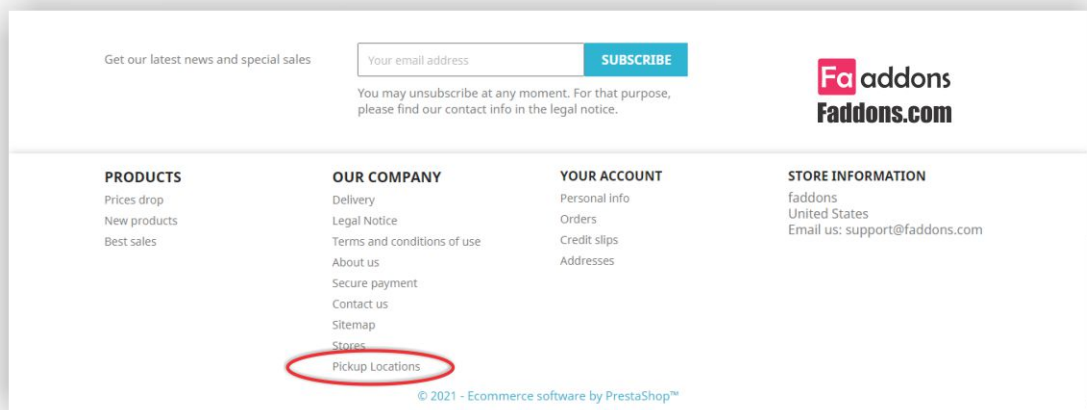

Store or pickup station options on the Checkout page
Here, the customer can select the pickup option for their product order. Note that other shipping methods are also available here.
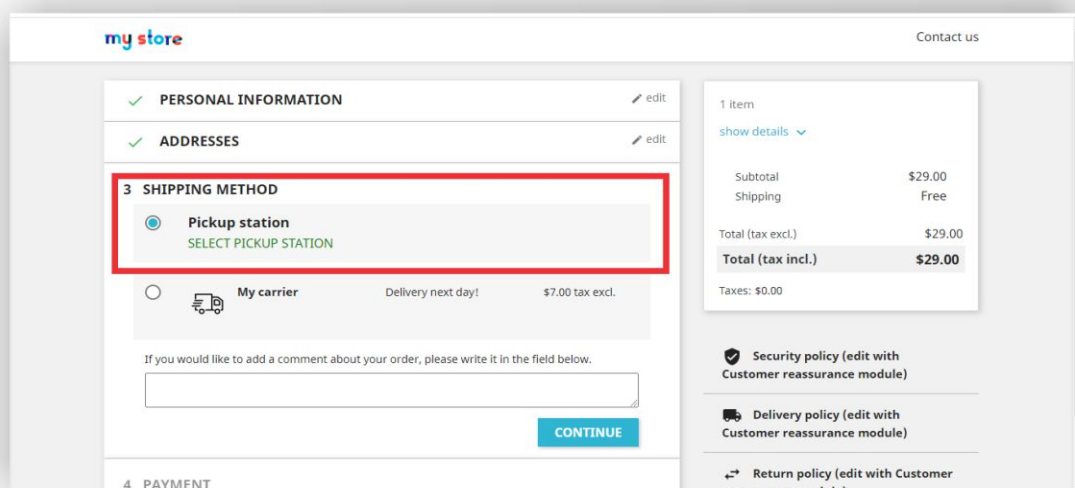

The customers can select the store or pickup station on the front-end by clicking on the **"Select Pickup Station"** as shown above.

The customers can place their pickup orders easily by selecting the store or pickup station as desired. On clicking the button, a popup will be shown in the image below.

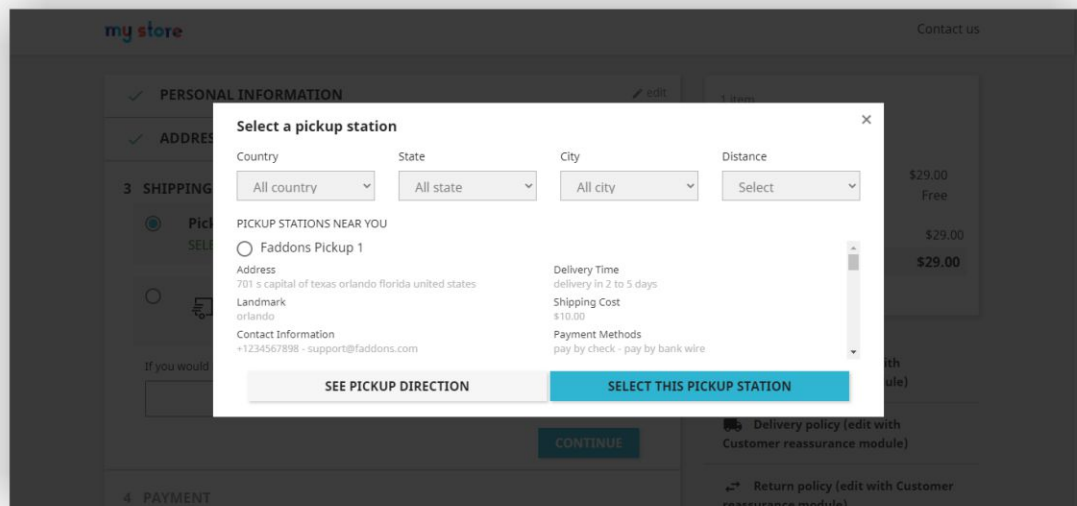

From the above, a customer can choose a store or pickup station by selecting the radio button by the side of each store or pickup station and then click on **"SELECT THIS PICKUP STATION"** or can click on "**SEE PICKUP DIRECTION"** to view the direction address on map of the store or pickup station

Below is the look when a store was finally selected. It let the customer know the minimum and maximum date the pickup or shipping will be available with price and details.
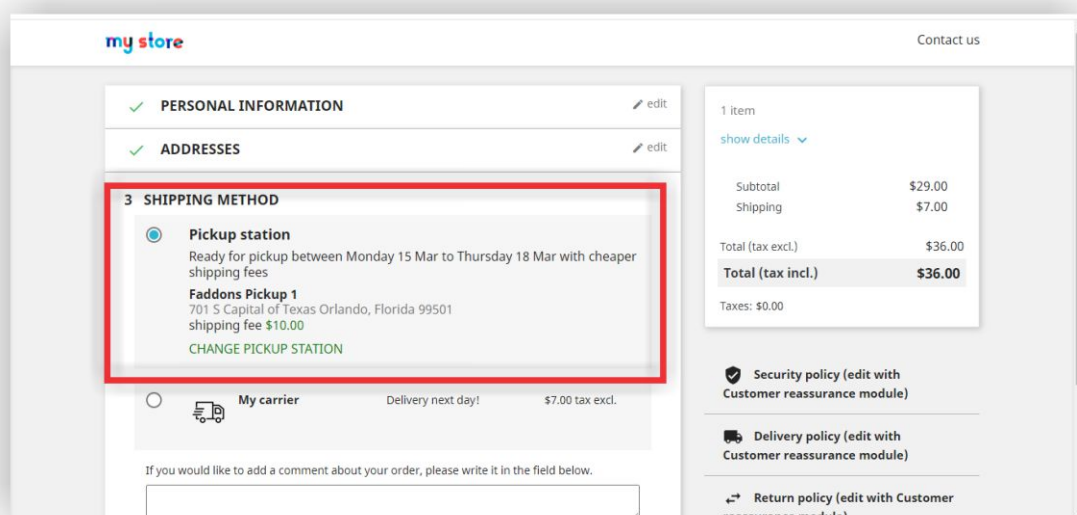

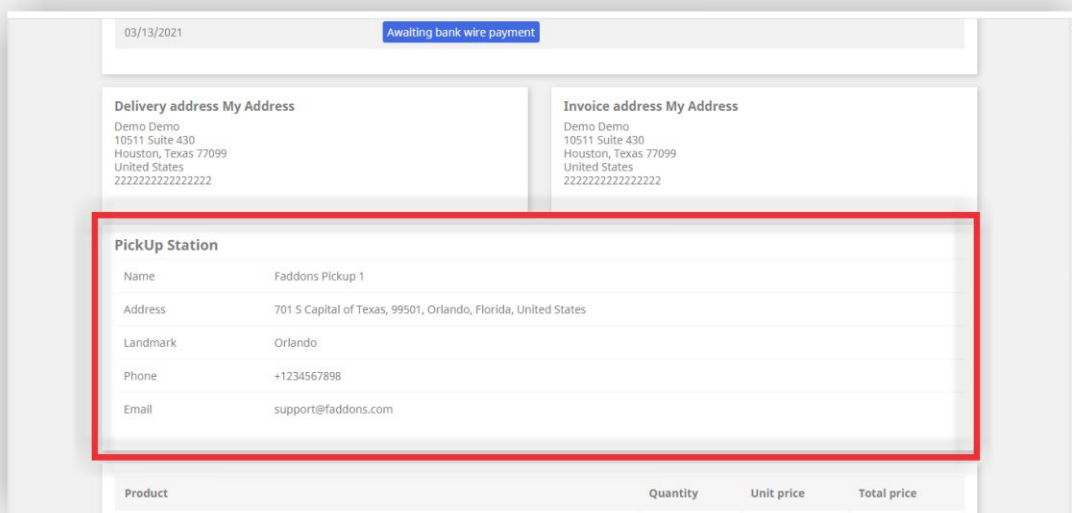

Pickup details after successful order completion (Back Office)

Navigate to **Prestashop Admin panel → Orders → Orders→ Then View the order**
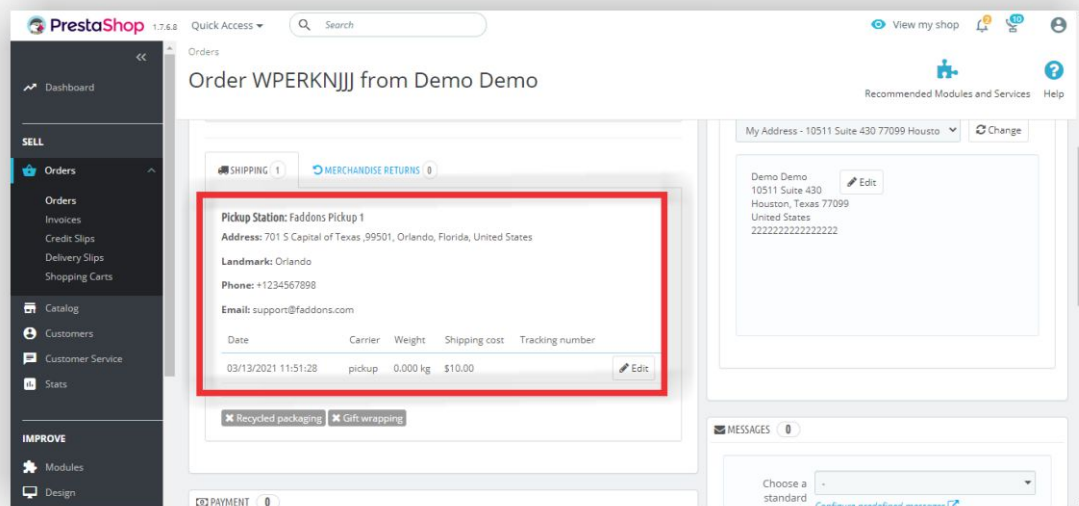

Pickup details after successful order completion (Front Office)

Customer will navigate to **My Account** page → **Order History and Details → then View the order** details

Pickup details after successful order completion (Invoice and Delivery Note)

Customer or admin can download invoice after successful payment or when order is ship, customer and admin can download delivery note and pickup station details will be available too on the invoices and delivery note too.

INVOICE

SHIPPING OR DELIVERY NOTE

This way, the online store merchant can show multiple physical stores, pickups, drop offs on the website using Google Maps and allow the online users to pick up the order from the store itself. The pickup module is highly customizable and allows showing multiple stores without any restriction. The e-merchant can show a store pickup option on the checkout page. The online users can select the nearest store and pick up their orders as per their preferences. They don't need to pay delivery charges or can pay less for the ordered product. The pickup module offers easy store management, admin can show store name, address, working days, contact information and store image easily for a better understanding of the customers. By offering the store locators and pickup facilities, admin can get more orders.
